

The Whisper Heritage Polled Shorthorn Difference

1. Grass Fed
2. Comprehensive Health Standards
3. Rigorous Reproductive Rules
4. Excellent Temperament
5. Classic Heritage Shorthorn Genetics
6. Udder Style
7. Conformation

Our Philosophy

Whispering Heritage Polled Shorthorns are selected with the goal of producing easy-keeping, fast growing cattle, while maintaining the family tradition of classic Dual Purpose Milking Shorthorns under grass fed conditions.

Our access to the genetics of classic Dual-Purpose Shorthorn bulls of the 50's, 60's, and 70's allows Whisper Heritage Polled Shorthorns to continually upgrade and refine our herd by utilizing a variety of heritage bulls.

Adherence to strict health standards and the utilization of rigid selection criteria guarantees breeding stock of the highest caliber both genotypically and phenotypically.

Buyers can be assured they will be purchasing Heritage Polled Shorthorns that will work in any farm environment.

Grass Fed

Whisper Heritage Shorthorns are totally grass fed emphasizing easy maintenance in a traditional setting. Rolling grass covered hills allow our Shorthorns to live productive lives under the same conditions as their ancestors in England. During the harsh winters they are supplemented with grass and alfalfa hay.

Comprehensive Health Standards

Whisper Heritage Shorthorns are free of Bovine Leucosis Virus and have always tested negative for Johne's Disease. Rigid vaccine protocols in conjunction with constant health monitoring results in vigorous healthy cows and calves.

Rigorous Reproductive Rules

Whisper Heritage Shorthorns are selected for both easy breeding and easy calving. Using modern techniques of reproductive tract measurements our cows have the ability to breed back quickly and calve problem free.

Excellent Temperament

Whisper Heritage Shorthorns calm temperament allows them to function in any environment from family farm to commercial operations. Tranquil cows equal productive cows.

Gentle, Healthy, Productive Dual Purpose Cows

Whisper Heritage Shorthorns embody the standards of the original Shorthorns developed in England during the late 18th and early 19th centuries. Those standards resulted in Shorthorns being the most popular cattle breed in the world for over 100 years.

Classic Genetics

Whisper Heritage Shorthorns access to semen from some of great Shorthorn bulls of the 50's, 60's and 70's create opportunities to purchase breeding stock that incorporate modern genetic selection with traditional Dual Purpose Shorthorn Characteristics.

Homozygous Polled Breeding Stock

Whisper Heritage Shorthorns have all been tested for the Horned/Polled genes. They are all polled and scur free. Limited numbers of homozygous polled heifers and bulls are available.

Udder Style

Whisper Heritage Shorthorns have well supported udders with moderate teat size that facilitates both hand and machine milking while allowing calves to suckle with ease. No bulbous teats.

Conformation

Whisper Heritage Shorthorns emphasize structural correctness with excellent body capacity. Without capacity cows can not eat, milk, or calve easily. Our cows have a range of colors: red, white, red & white, and a wide variety of roans.
